1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 and 12-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujii.

In Table 6, example 14, Fujii discloses a composite comprising 52 wt. % polypropylene, 36 wt. % cellulosic filler, 9 wt. % calcium oxide and 2.7 wt. % of a maleic anhydride grafted polypropylene. The graft polymer would be low in molecular weight because it has a high melt flow rate (paragraph 31 of translation). The cellulosic filler would be low in moisture content because the large amount of calcium oxide would react with the moisture. Paragraph 20 of the translation discloses other additives, such as, glass fiber. The Young's modulus values of the composite would be inherent because the composition is the same as the claimed composition.

3. The Declaration under 37 C.F.R. 1.132 has been considered, but doesn't apply to the above rejection because the amount of calcium oxide falls within the specified range in the Fujii reference.

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
